GRIP CLEANING, LUBRICATION & INSPECTION

To keep your Little Mule Wire Grips in good working condition, we recommend taking the following steps:

CLEANING & LUBRICATION:

Step 1: Clean the surfaces of the grip jaws using a cloth or round wire brush.

Step 2: Spray all joints and moving parts, including the jaws, with degreaser. Then, use a round wire brush to remove any dirt from the jaws.

Step 3: Once clean, wipe the wire grips until they are dry. If grips are still dirty, repeat steps as needed.

Step 4: Lubricate all joints and any moving parts. The surfaces of the grip jaws should not be lubricated.

INSPECTION:

To inspect the wire grip, carefully examine the condition of the jaws. Next, check that the jaws and other parts of the grip are aligned to ensure that there is no distortion. Once you’ve inspected the jaws, open and close the grips to check for smooth operation. Finally, check all other parts and joints for any distortion.

During the inspection, if you find that the grip is bent or distorted, it should be thrown away and replaced. It should NOT be repaired.
